

FIRE PROTECTION OBJECTIVE

7712

(No.70 November 2016)

CAL FIRE's fire protection objective states that a system of basic fire protection will be provided so that damage to life, property, and natural resources will be held at or below a level acceptable within social, political, and economic constraints. This objective is broad in concept; however, it provides a framework within which CAL FIRE's fire protection managers can plan and implement a fire protection system, and incident managers can plan strategy and tactics on any given incident.
